

# Foundation Design

The Foundation Design is recommended for people who need a clear and basic design of what's possible for their site, a thorough list of resources and networks they can access to help them bring their design to life.

## Client's receive

- A black and white, to scale permaculture design,
- A report 5-10 pages long with relevant detailed information,
- A thorough list of resources and networks to support the client, and
- One follow up phone conversation about the design concept if needed.

## What's the process

- Residents complete a pre-visit questionnaire via email which provides us with good insight into you, your lifestyle and home.
- We gather some basic site information via internet sources and develop a to scale base map. If you have existing property maps we can work from these instead.
- Two – four hour visit to your property consisting of:
  - Approximately 30 - 60 minute meeting with resident/s.
  - Approximately 1-2 hour solo walk around the property where rough hand drawn, non-colour and not to scale sketches are drawn.
- 30- 40mts: Second meeting with resident/s and talk through all design concepts. Ideas are revised and refined throughout this process until a clear trajectory is established.
- Back at home, we'll develop a to-scale draft concept and email it through for consideration.
- Once feedback has been received (over phone, email or face-to-face) we complete the final design and report. This is emailed through and one follow up conversation is provided to clarify details as needed.
- If desired, we connect you to contractors to implement some, or all of the design.

**Please note, detail around plant varieties, building or landscaping materials are not provided as part of this design option.**

## Design Fee

- Please contact us to arrange an accurate quote.
- We also have a travel fee of \$50 per hour to get to and from your site.
